## OUR ROLES

- WEBSITE DESIGN AND DEVELOPMENT

Stokes was tasked to create a fully responsive website for the Delaware River Joint Toll Bridge Commission and provide full back-end training for the website to all DRJTBC employees.

The DRJTBC website includes in-depth travel information for the public, toll rates, discount information, violation information, and safety advisories. Detailed information on DRJTBC meetings, audits, and inspection reports are all stored and easily retrieved. Stokes even created a convenient online application for truck permits. The customized application includes details such as weight restrictions and contact info for questions on the application process.

A very exciting part of the DRJTBC website is the fully interactive bridge map. An overview of DRJTBC-owned bridges is featured and the display can be filtered in two different ways: by selecting the name of a specific bridge or by filtering for a certain type of bridge—toll, toll-supported, or pedestrian. Each bridge has its own page with stunning visuals, as well as historical and as practical information. The end result of Stokes' efforts on this project is a beautiful, user-friendly website with a large amount of data that is clearly organized and easily navigated.
